

Dr. Pegg has worked as a Defence Scientist for DRDC Atlantic for the past 24 years. He graduated with an MASc in Civil Engineering from UBC in 1983 and received a PhD from the Technical University of Nova Scotia (now Dalhousie) in 1991 where he has been an adjunct professor in Civil Engineering since 1993. He is currently Head of the Warship Performance Section at DRDC and leader of the Naval Platforms research thrust, with his specialty being advanced analysis methods for ship and submarine structures. He has served on several international research organizations including the International Ship Structures Congress, principle member to the U.S. Ship Structures Committee, MARIN Cooperative Research Ships and several Defence international exchange programs.
